

Pulling wire through a stud

Facility:	Written By:	Approved By:	Date Created:	Date of Last Revision

Hazards Present:	PPE or Devices Required:	Additional Training Required:
Debris in the eyes	Eye protection	
Pinching	Hand protection	
Slivers		

Safe Work Procedure:

1. Use a drill and proper size drill bit to drill the locations in their desired location ensuring that the edge of the drilled hole is at least 1¼ inches in from the face of the stud
2. Insert the wire to be “pulled” into the hole in the first stud and feed the wire through the successive studs until you reach the termination point
3. Cut the wire to the desired length at each end of the wire

If an emergency situation occurs while conducting this task, or there is an equipment malfunction, engage the emergency stop and follow the lock out procedure
