

SAFETY TALK

Freezing rain

Freezing rain is a common concern in fall.

What's the danger?

Freezing rain causes roads and walkways to be extra slippery.

Freezing rain can soak through your clothes, causing your body temperature to drop.

How to protect yourself

Driving:

- Verify road conditions by checking local weather and traffic reports
- Drive at reduced speeds and allow a safe distance between you and the car in front of you
- Make sure that your headlights, taillights, beacons and windows are clean
- Wear your seatbelt

Slips and falls:

- Always look ahead for slippery ice surfaces
- Wear boots with rubber soles and attach grips to the bottom if necessary
- Exercise caution when getting in and out of vehicles and equipment, and when entering and exiting buildings

Working outside:

- Warm, waterproof clothes and footwear are best for working outside
- Dress in layers
- Change out of your wet clothes when you get home
